

Product Tagging Manual

The exact tags to enter in a product's Organization panel so it appears under Shop by Occasion, Shop by Style and Shop by Colour on the homepage.

1. How tagging works here
2. How to add a tag (step by step)
3. Shop by Occasion — exact tags
4. Shop by Style — exact tags
5. Shop by Colour — exact tags
6. The `online` tag — required on everything
7. Worked examples
8. Troubleshooting
9. One-time setup: collections still to be created

1. How tagging works here

Every tag goes in the same place: the **Tags** box inside the **Product organization** card on the right-hand side of the product page in Shopify admin. There is nothing else to configure per product.

What the tag does depends on the section:

SECTION	WHAT THE TAG ACTUALLY DOES
Shop by Occasion	The homepage card links to a Shopify <i>automated collection</i> . That collection has one rule: <i>Product tag is equal to</i> Tag the product and it joins the collection within seconds.
Shop by Style	Identical mechanism — an automated collection with a single tag rule.
Shop by Colour	No collection involved. The theme reads the tag directly off the product and files it under the matching swatch.

Golden rules

- Tags are **lowercase with hyphens**. Type them exactly as printed in this manual.
- Shopify autocompletes existing tags — **always pick the suggestion** rather than retyping, so you never create `occasion-eid` and `Occasion-Eid` as two separate tags.
- A product may carry as many of these tags as genuinely apply. A gold-rimmed platter can be `occasion-eid`, `occasion-wedding-gifts`, `style-contemporary` and `gold` all at once.
- Press **Enter** after each tag, then **Save**.

2. How to add a tag — step by step

- 1 Shopify admin → **Products** → open the product.
- 2 Scroll the right-hand column to the **Product organization** card.
- 3 Click into the **Tags** field.
- 4 Start typing the tag. A dropdown of existing tags appears — **click the matching suggestion**. Only type it in full if it is a brand-new tag from this manual.
- 5 Press **Enter**. The tag appears as a grey chip below the field.
- 6 Repeat for every tag that applies (occasion, style, colour, plus `online`).
- 7 Click **Save** (top right).
- 8 Open the storefront homepage and hard-refresh. The product should now appear under its swatch / card.

Tagging many products at once

- 1 Products list → tick the checkboxes of the products.
- 2 Click **Add tags** in the bulk action bar at the top.
- 3 Type or select the tag → **Apply changes**.

Careful: bulk *Add tags* adds to every selected product. Only bulk-tag products that all share the same occasion, style or colour.

3. Shop by Occasion — exact tags

Six cards on the homepage. Tag a product with the value in the **Tag to add** column and it appears on that card's collection page.

CARD ON HOMEPAGE	TAG TO ADD	COLLECTION	STATUS
Everyday Dining Sturdy, beautiful staples	occasion-everyday-dining	Everyday Dining	COLLECTION TO CREATE
Hosting Guests Sets that impress	occasion-hosting-guests	Hosting Guests	COLLECTION TO CREATE
Tea Time Slow afternoon rituals	occasion-tea-time	Tea Time	LIVE — 37 PRODUCTS
Ramadan Iftar & suhoor tables	occasion-ramadan	Ramadan	COLLECTION TO CREATE
Eid Festive gatherings	occasion-eid	Eid	COLLECTION TO CREATE
Wedding Gifts Heirlooms to give	occasion-wedding-gifts	Wedding Gifts	COLLECTION TO CREATE

Read this before you start. Only **Tea Time** is wired up today. The other five homepage cards still point at older manual collections (Plates, Serveware, Platters, New Arrivals, Dinner / Breakfast Sets), so tagging alone will not change them yet. Section 9 has the one-time setup that switches them over. You can start tagging products now — the tags will take effect the moment the collections exist.

4. Shop by Style — exact tags

Five tiles on the homepage. Same mechanism as Occasion.

TILE ON HOMEPAGE	TAG TO ADD	COLLECTION	STATUS
Minimalist	style-minimalist	Minimalist	COLLECTION TO CREATE
Earthy	style-earthy	Earthy	LIVE – 12 PRODUCTS
Reactive	style-reactive	Reactive	LIVE – 8 PRODUCTS
Contemporary	style-contemporary	Contemporary	COLLECTION TO CREATE
Hotel Collection	style-hotel-collection	Hotel Collection	COLLECTION TO CREATE

Which style is which?

- **Minimalist** — plain, undecorated, single flat colour; clean silhouettes.
- **Earthy** — natural materials and textures: jute, rattan, wood, rope, unglazed clay.
- **Reactive** — reactive-glaze stoneware where the colour pools and varies piece to piece.
- **Contemporary** — patterned or decorated modern tableware; full dinner/breakfast sets.
- **Hotel Collection** — hospitality-grade serveware, crisp white/ivory, stackable.

5. Shop by Colour — exact tags

Twenty-one swatches. These do **not** use collections — the theme reads the tag straight off the product, so the tag works the moment you save.

Important — when the colour tag is ignored

If the product has a variant option literally named **Color**, **Colour**, **Shade** or **Glaze**, the theme uses that option and **ignores colour tags completely**. That is deliberate: a handi sold in nine glazes must appear under nine swatches, each showing its own variant photo.

- **Product sold in several colours from one listing** → do *not* add colour tags. Instead make sure the option is named `Color` and each option value is spelled exactly as the swatch name in the table below.
- **Product that comes in one colour only** → add the colour tag from the table.

SWATCH	TAG TO ADD	ALSO MATCHES THESE NAMES
 Whimsy Yellow	<code>whimsy-yellow</code>	—
 Aqua	<code>aqua</code>	—
 Sage Green	<code>sage-green</code>	—
 Ivory White	<code>ivory-white</code>	Cream
 Burnt Maple	<code>burnt-maple</code>	—
 Riviera Blue	<code>riviera-blue</code>	—
 Coconut Terra	<code>coconut-terra</code>	Coconut
 Teal	<code>teal</code>	—
 Reactive Santorini Blue	<code>reactive-santorini-blue</code>	Santorini Blue
 Reactive Cloud Grey	<code>reactive-cloud-grey</code>	Cloud Grey
 Limone Yellow	<code>limone-yellow</code>	Limone Gardenia
 Windsor Red	<code>windsor-red</code>	Windsor Bloom
 Boho Floral	<code>boho-floral</code>	Boho Garden
 Aqua-grey	<code>aqua-grey</code>	—
 Jute Natural	<code>jute-natural</code>	Jute, Rattan, Rustic, Rope, Handwoven
 Stone Grey	<code>stone-grey</code>	Stone
 Gold	<code>gold</code>	Golden
 Copper	<code>copper</code>	—
 Silver	<code>silver</code>	—
 Black	<code>black</code>	Matte black, Black Matte
 Turquoise	<code>turquoise</code>	—

Two things that catch people out

- **Aqua vs Aqua-grey.** If you tag a product `aqua-grey` it shows only under Aqua-grey. Without a tag, the theme falls back to the product title — and a title containing "Aqua-grey" is deliberately kept out of plain Aqua. Tagging removes all ambiguity, so tag anything in these two shades.

- **The product must be in at least one collection.** Shop by Colour walks the store's collections. A product that belongs to no collection at all will never appear under any swatch, however it is tagged.

6. The online tag — required on everything

The main **Shop** collection (90 products today) is automated with three rules, all of which must be true:

RULE	MEANING
Price is greater than 1	The product has a real price
Inventory is greater than 1	At least 2 in stock
Product tag is equal to online	You must add this tag by hand

Every new product needs the online tag, or it will not appear in the Shop collection no matter how well it is tagged otherwise. Make this the first tag you add.

7. Worked examples

Example A — a single-colour serving platter for Eid

"*Meraki Serving Platter — Gold*", one colour only, hospitality style.

Tags to enter: online, occasion-eid, occasion-hosting-guests, style-hotel-collection, gold

Example B — a handi sold in nine glazes

"*Hand-Painted Handi*", with a **Color** variant option.

Tags to enter: online, occasion-everyday-dining, style-reactive

No colour tag. Instead, open **Variants** and check the option is named Color and its values read exactly *Sage Green*, *Aqua*, *Teal* and so on — spelled as in the section 5 table. Each variant then appears under its own swatch with its own photo.

Example C — a jute placemat set

"*Jute Weave Placemats — Set of 2*".

Tags to enter: online, occasion-everyday-dining, style-earthy, jute-natural

8. Troubleshooting

SYMPTOM	FIX
Product does not appear under its colour swatch	Check it is in at least one collection; check it has no <code>Color</code> / <code>Colour</code> / <code>Shade</code> / <code>Glaze</code> variant option (if it does, fix the option values instead of tagging); check the tag spelling against section 5.
Product does not appear on an Occasion or Style page	Confirm the collection exists and is automated on that exact tag (section 9). Then re-check the tag spelling — a trailing space or a capital letter creates a separate tag.
Product missing from the Shop page	Missing <code>online</code> tag, price of 0, or stock of 1 or less.
Two versions of the same tag in the dropdown	Bulk-select the products on the wrong variant, remove it, add the correct one. Then always pick from autocomplete.
A colour swatch says "Nothing in this shade just yet"	No product currently matches. Tag some products, or hide that swatch in the theme editor.
Only 12 products show per colour	By design — the swatch grid is capped at 12. Change it in the theme editor under <i>Shop by Colour</i> → <i>Products to show</i> .

9. One-time setup — collections still to be created

This is a store-admin task, done once. Until it is done, only Tea Time, Earthy and Reactive respond to tags.

Create each missing collection

- 1 Shopify admin → **Products** → **Collections** → **Create collection**.
- 2 **Title**: the card name (e.g. *Wedding Gifts*).
- 3 Under **Collection type** choose **Automated**.
- 4 Set **Products must match**: **all conditions**.
- 5 Condition: **Product tag** — **is equal to** — the tag from the table below.
- 6 **Save**. Note the handle Shopify generates.

COLLECTION TITLE	RULE: PRODUCT TAG EQUALS	HANDLE
Everyday Dining	occasion-everyday-dining	everyday-dining
Hosting Guests	occasion-hosting-guests	hosting-guests
Ramadan	occasion-ramadan	ramadan
Eid	occasion-eid	eid
Wedding Gifts	occasion-wedding-gifts	wedding-gifts
Minimalist	style-minimalist	minimalist
Contemporary	style-contemporary	contemporary
Hotel Collection	style-hotel-collection	hotel-collection

Point the homepage cards at them

- 1 Online Store → **Themes** → **Customize** on the live theme.
- 2 Open the **THP Shop by Occasion** section, click a card block.
- 3 Set **Collection** to the new collection. **Clear the "Custom link" field** — a custom link overrides the collection, and five of the six cards have one set today.
- 4 Repeat for every card, then for each tile in **THP Shop by Style** (those use the **Link** field, currently empty — leave it empty and just set the collection).
- 5 **Save**, then check the homepage.

The product counts on the Occasion cards are live. A newly created collection reads "0 varieties" until products are tagged, so tag before you switch the cards over, or switch and tag the same day.

Backfilling the existing catalogue

The three tag-driven collections cover 37, 12 and 8 products. Everything else is untagged for occasion and style, and no product carries a colour tag yet. Suggested order of work:

1. Bulk-add `online` to every product that should be sellable.
2. Work collection by collection — open Plates, tag them all `occasion-everyday-dining`; open Serveware, tag `occasion-hosting-guests`; and so on.
3. Then styles, using the definitions in section 4.
4. Colours last, and only for products that do **not** have a colour variant option.
